\*Be sure to get enough calcium during pregnancy. Talk with your provider about ways to do this with the foods you eat and vitamin supplements.

## Food samples

Each of the following is about 15 grams of carbohydrate:

### Starch

- 1 slice bread or small dinner roll
- 6 saltine crackers
- ½ English muffin
- ½ cup corn, potato, green peas, yam, or sweet potato
- 1 cup winter squash (butternut or acorn)
- 1 cup vegetables mixed with corn, peas, and beans
- ½ cup cooked cereal
- ¾ cup unsweetened cereal flakes
- ⅓ cup pasta or rice
- ⅓ cup cooked polenta, couscous, or quinoa
- ½ cup cooked dried beans, peas, or lentils

**Non-starchy vegetables** — 3 cups raw or 1½ cups cooked vegetables, or ½ cups vegetable juice - examples include:

- Asparagus
- Green beans
- Broccoli
- Cabbage
- Cauliflower
- Carrots
- Celery
- Cucumber
- Mushrooms
- Eggplant
- Greens (such as collard, kale, mustard, and turnip)
- Jicama
- Peppers
- Snap peas
- Mushrooms
- Tomatoes
- Zucchini

### Fruit

- Small apple, pear, or orange
- ½ banana
- ½ cup canned fruit (no sugar added)
- 1 cup berries or melon
- ½ cup fruit juice

### Milk and yogurt

- 1 cup nonfat, low-fat, or 2% milk
- 6 ounces sugar-free nonfat or low-fat yogurt

**Protein and fats** — Lean proteins and healthy fats are not carbohydrates.

**Lean protein** — 1 serving is 1 oz.

- Chicken, other poultry without skin
- Beef, pork, lamb, or veal trimmed of fat
- Fish and shellfish
- Cheese and cottage cheese
- Tofu and tempeh
- Cooked soy beans (edamame)
- 2 egg whites or ¼ cup egg substitute
- 1 whole egg
- 1 Tbsp peanut butter

### Heart healthy fats

- 2 Tbsp low-fat salad dressing
- 1 Tbsp low-fat mayo
- 1 tsp olive or canola oil
- 1 tsp soft tub margarine or 2 tsp of reduced fat margarine
- 6 nuts (almonds or cashews)

# Gestational diabetes: 2000 calorie meal plan

## Guidelines to help control gestational diabetes

---

1. Don't skip meals. Eat 3 meals plus 3 snacks every day. Eat meals at consistent times each day.  
**Always eat a before-bed snack.**
2. It is especially important to eat the grams of carbohydrate that are planned per meal and snack. Please call your provider if you have problems following your meal plan.
3. Avoid sugar and concentrated sweet foods and beverages. It is especially difficult to control blood glucose levels in gestational diabetes when any sweets are eaten.
4. Choose higher fiber foods. Eating fiber as part of your meal can slow the rise in your blood glucose level.
5. Talk to your provider about seeing a dietician for one-on-one counseling to develop a meal plan that's right for you. This is especially important if you have a multiple pregnancy (like twins or triplets), special nutritional needs, or have had gastric bypass surgery.

### Protein and fats – you need these during pregnancy

Protein and fats provide essential nutrients for your baby's development, so eating these in moderation is good during pregnancy. Choose unsaturated fats including omega-3 and mono- or polyunsaturated fat. Limit foods with saturated and trans fats, which can raise your cholesterol levels.
